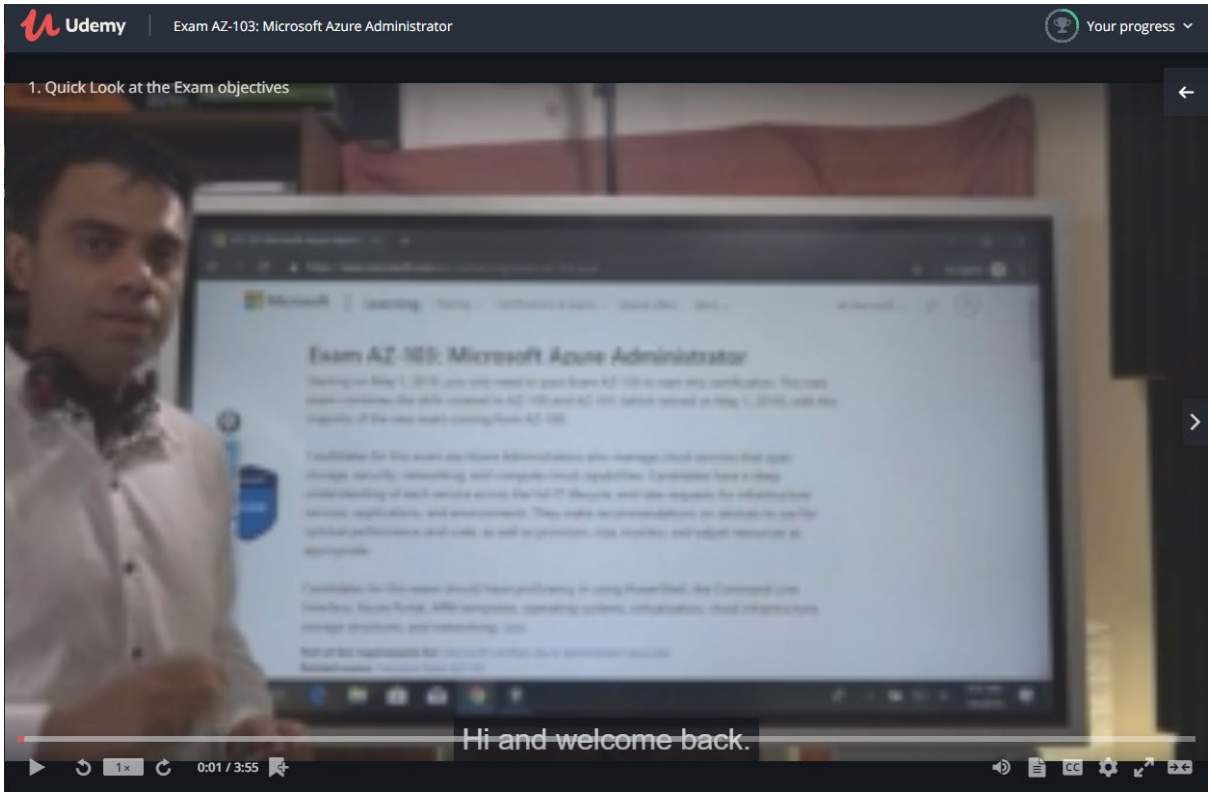
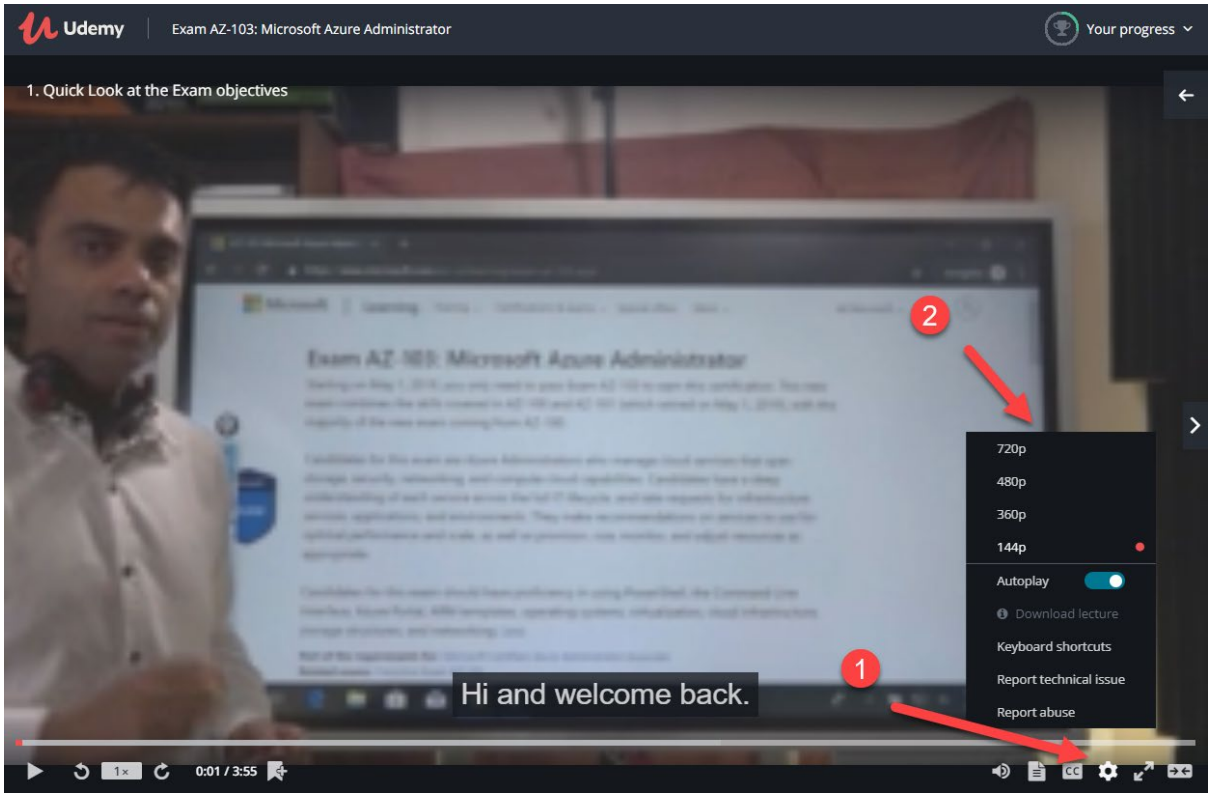
Important Instructions

These instructions are meant for students to make the best use of this course.

1. ***Issue with blurry videos*** – All videos are recorded in either 720p or 1080p. All videos are of high quality. There can be cases wherein users complain of blurry videos as shown below

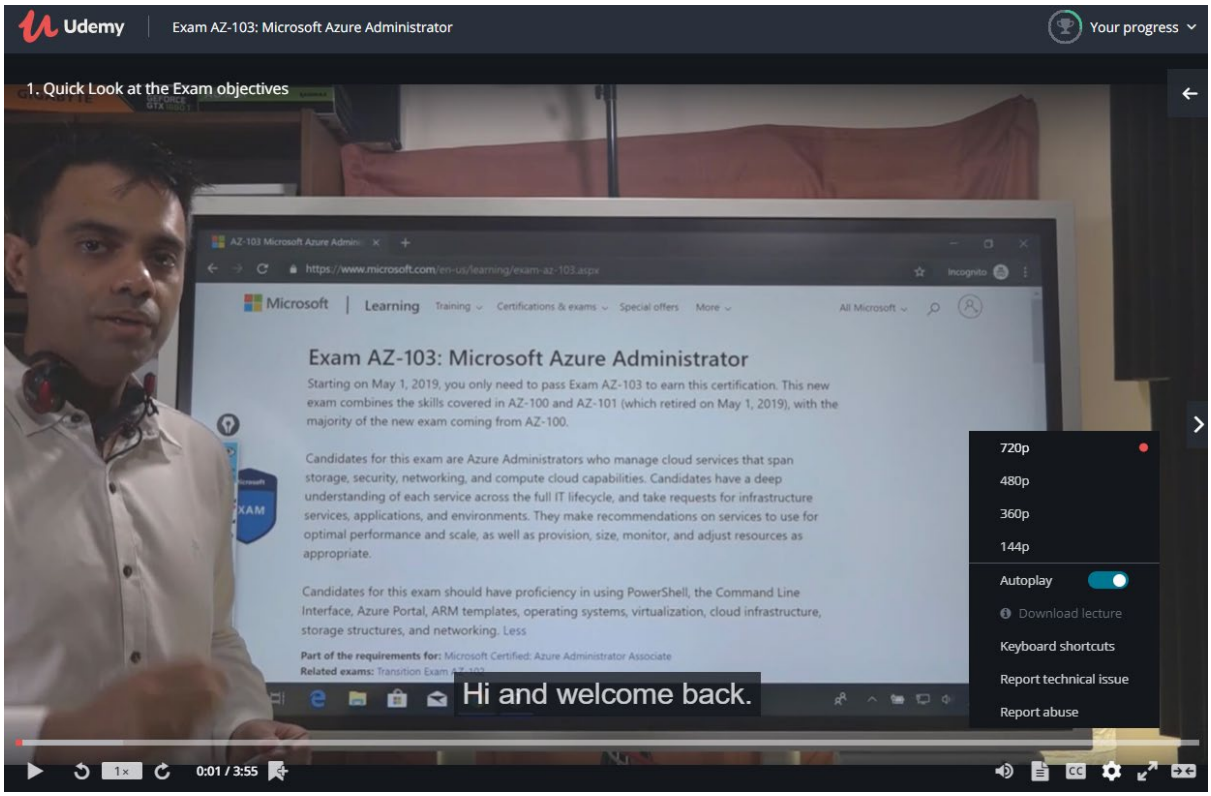


This is because of the resolution of the video player. Please follow the below steps to rectify this issue



1) Go to your settings
2) Change the resolution to 720p

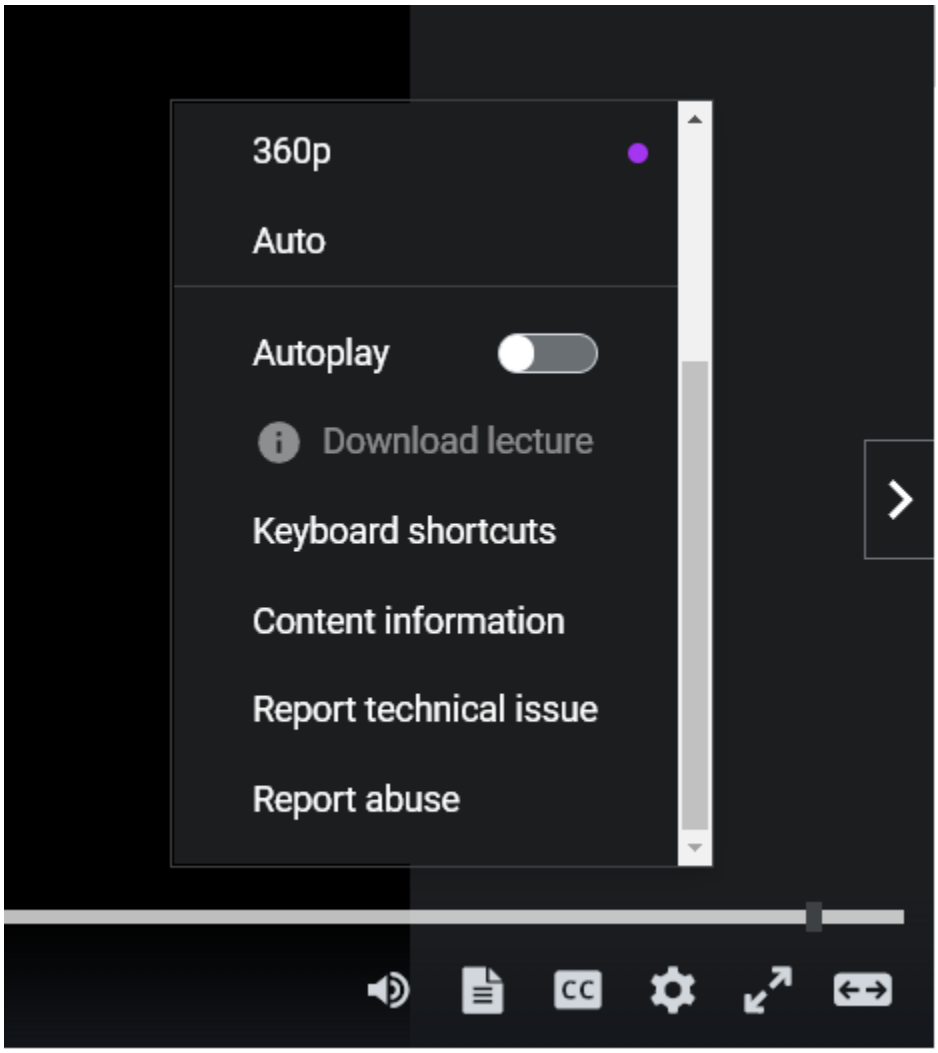
This will improve the quality of the video



2. **Downloading a lecture**

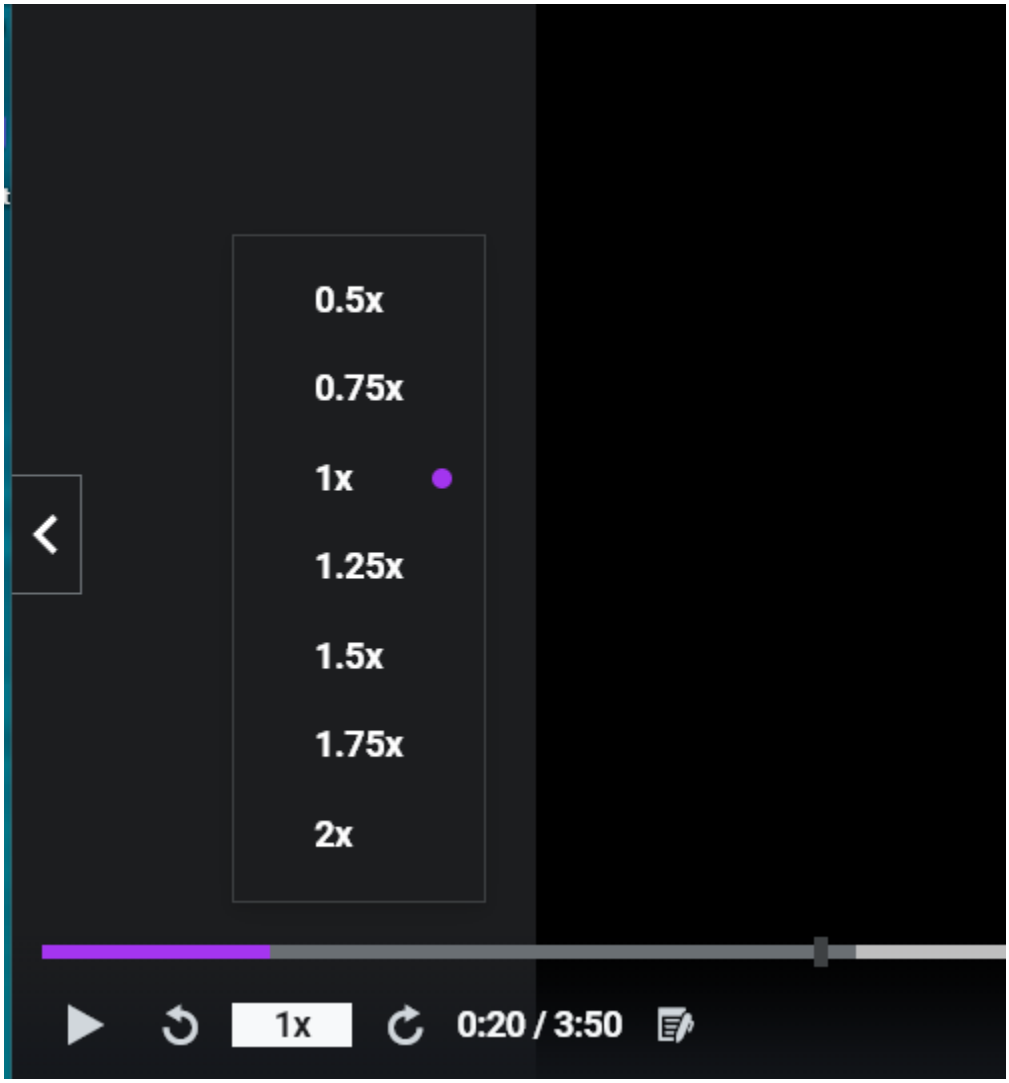
Udemy does not allow the downloading of lectures onto the local computer. You can only download lectures via the Udemy mobile application.

Even if you see the option of downloading a lecture on the computer system, this will be enabled. As an instructor there is no option for us to enable this feature. This is completely managed by Udemy.



3. **Pacing the voice content**

Now I pace my voice content in such a way that I ensure that it can cater to all students. If students need a faster pace , they can always change the speed of the video accordingly.

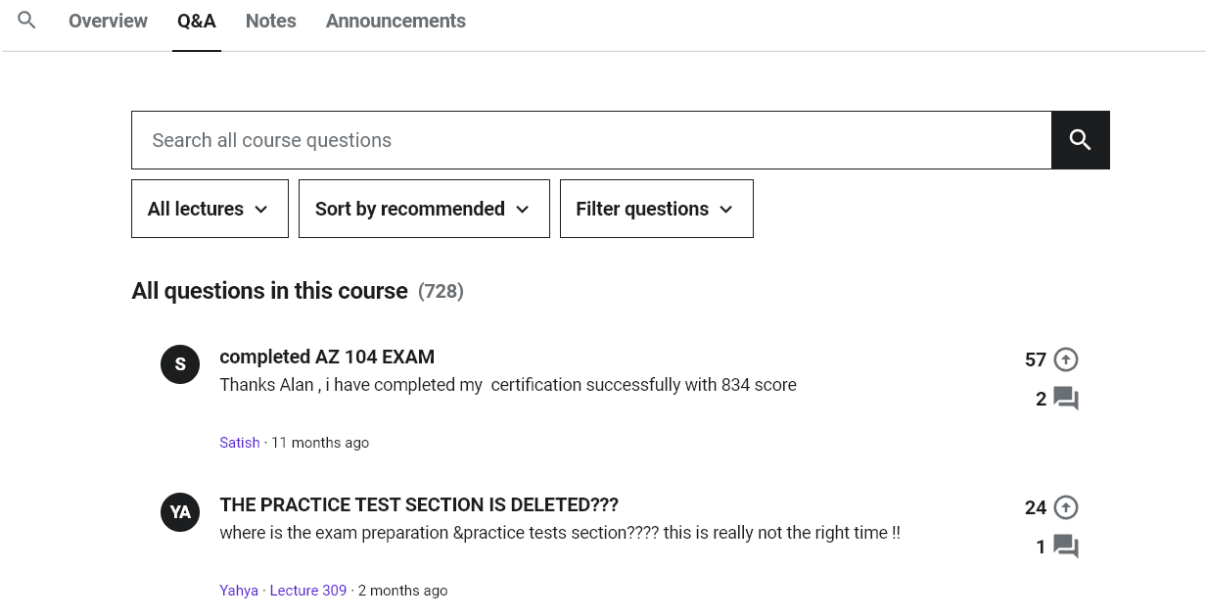


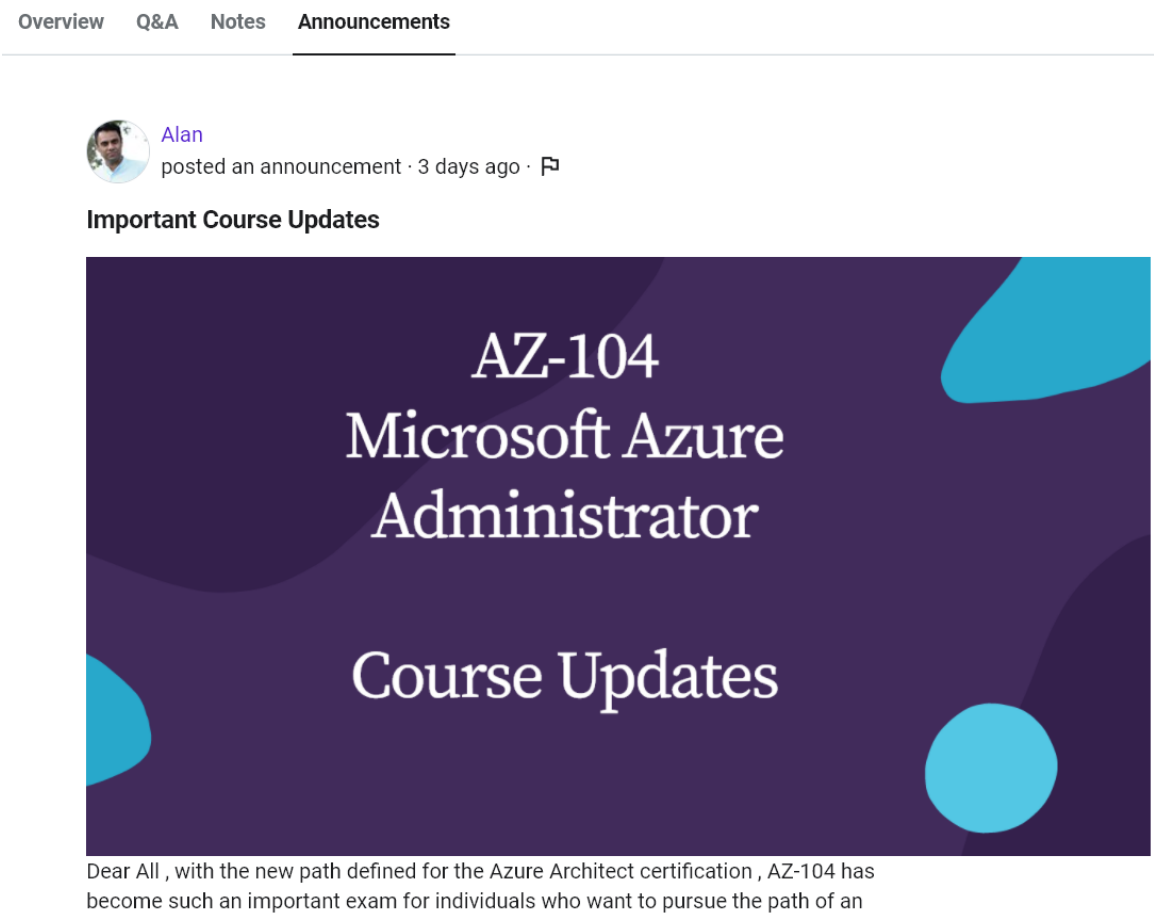
4. Questions

Questions about technical content related to the course can be posted to the Q and A section of the course.

Please note that the Q and A section is a public forum for the course itself where other students can also answer questions. It sometimes becomes difficult for me to answer all questions because of the sheer volume of questions received across all courses.

Please ensure that when posting a question, that it pertains to the course only.



5. Announcements


Always look at the course announcements. I make educational announcements which sometimes relates to changes in the course content. Normally these are updates to the course. Always ensure to go through the announcements.
